Home Page

Know Us

TekMark delivers end-to-end QA services with a unique blend of AI & Domain Blend expertise, bringing innovation and reliability to industries

AI Testing

Along with supporting our clients' evolving QA needs—from core functional, automation and API testing—we specialize in addressing their future testing requirements through advanced solutions that integrate AI and Agentic AI capabilities. Our AI-powered testing services ensure high-quality software by leveraging advanced machine learning and intelligent automation, with a strong focus on accuracy, speed and reducing manual effort to deliver superior performance and reliability.

Testing Services

Testing support

With Our Extensive QA Experience Spanning Over Two Decades, Our Team at TekMark Brings a Wealth of Knowledge and Skill to the Table...

Testing Roadmap

TekMark Specializes in Developing Customized Strategic Testing Roadmaps to Meet Clients' Exact Needs.

Testing Managed Services

Testing as a Service (TaaS) a Concept That's Like Having a QA Genie in the Cloud, Ready to Grant Your Testing Wishes!

Why Choose TekMark ?

Deep Domain Expertise

Specialized knowledge across diverse industries.

Global Experience

Two decades of proven success worldwide.

Tailor-made Strategies

Solutions designed specifically for your unique needs.

AI-Augmented Testing

Leveraging cutting-edge AI for smarter, faster QA.

Cost-Effective Quality

High standards without compromising your budget.

Client Engagement

Our QA Engagement Model is Transparent, Result-Driven and Aligned to your Success KPIs.

Communication

Regular sync-ups, daily standups and stakeholder updates to ensure clarity and transparency throughout the QA lifecycle.

Testing Status

Real-time test coverage, execution progress and defect status shared through dashboards and reports.

Testing Sign-off Criteria

Clearly defined benchmarks for test completion, coverage and defect thresholds agreed before final release.

Final Verdict – Improved QA Maturity

Enhanced processes, automation coverage, defect leakage reduction and client satisfaction ensured.

Watch More from TekMark....

IT Services

We Deliver Innovative IT Solutions to Empower Your Business With the Latest Technologies.

Software Development

Custom applications and enterprise solutions tailored to your needs.

IT Consulting

Expert guidance to align your IT strategies with business goals.

IT Services

24/7 monitoring and maintenance for seamless IT operations.

Cloud Solutions

Secure and scalable cloud services to transform your IT infrastructure.

Network Solutions

Reliable and high-speed network setups for smooth connectivity.

Cyber Security

Comprehensive security strategies to protect your business from digital threats.

Know US

Know Us

Full-Service QA with AI & Domain Blend.

Who We Are?

With Over Two Decades of Global QA Expertise, we specialize in developing and executing high-impact quality assurance strategies for US and international clients. Our core focus is on optimizing testing processes, tools and teams to deliver exceptional product quality, accelerate time-to-market and maximize return on investment. We employ a strategic approach combining industry best practices with cutting-edge technologies like Shift Left, TaaS and AI-augmented testing. By proactively identifying and mitigating risks, we help organizations deliver high-quality products that exceed customer expectations and drive growth.

Our Expertise

Insurance

Deep industry knowledge in healthcare and compliance.

Warranties

Seamless warranty claims and processing expertise.

Financial Services

Banking, investment and secure financial systems.

Healthcare

Patient-centric digital health testing.

PBM

Efficient pharmacy benefits testing.

Telecom

Complex telecom environments and networks.

Consulting

Strategic, technical and QA advisory support.

IT Helpdesk

Tech support and user service reliability.

CPG

Smooth QA for fast-moving consumer products.

Why Choose TekMark?

We bring unmatched expertise, reliability and innovation to every solution we deliver.

Our client-centric approach, combined with industry-leading practices, ensures measurable results and long-term success.

Partner with us to experience excellence powered by passion and precision.

What TekMark Brings to Clients

Happy Users

TekMark delivers bug-free, user-friendly products.

Expertise

Decades of QA leadership and technical depth.

Cost-Saving

Automation + smart processes = lower QA cost.

Custom Strategy

QA plans tailored to your business goals.

AI Power

Smarter testing using AI and predictive analytics.

TaaS Model

Integrated QA services, not just outsourced testing.

Shift Left

Early testing = fewer bugs, faster releases.

AI Testing

AI Testing

Delivering Smarter QA Solutions with AI.

At TekMark, we Deliver Innovative and Highly Customized Testing Solutions, Tailored to each Client's specific needs. We understand that one-size-fits-all does not apply in software quality assurance. That's why we never rely on generic solutions—instead, we build targeted testing strategies powered by AI to drive efficiency, accuracy and agility.

Our AI-Driven Testing Strategy Includes:

Assessment of Current Manual Testing Practices-

We Evaluate the Existing QA Process to Identify Gaps, Inefficiencies and Opportunities for AI Integration.

Comprehensive Audit of Test Assets-

A Detailed Review of Test Cases, Scripts, Data and Execution History Helps us Understand Test Coverage and Quality.

Selection of Pilot Areas-

We Begin with Carefully Chosen Test Areas to Measure AI's Impact and Validate its Benefits Before Scaling.

Prioritization of High-Risk, Frequently Changed Modules-

Modules with a History of Frequent Changes or High Defect Density are Targeted First for AI-Assisted Optimization.

Identification of Manual-Intensive Tasks-

We Focus on Areas with Repetitive Manual Effort—Such as File Validations, Log Analysis and Large Data Comparisons—where AI can Provide Significant Efficiency Gains.

Training & Enablement of QA Teams-

We Empower Teams Through Workshops and Hands-On Sessions to Adopt AI-Enhanced Testing Workflows Confidently and Effectively.

Intelligent Test Guidance Using AI Insights-

AI Models Suggest Exploratory Areas Based on Historical Defects, Production Usage Patterns and Behavioral Analytics to Enhance Manual Testing Coverage.

EFT Testing with AI Agent

Agentic AI–Based EFT Testing

At TekMark, we have developed an Agentic AI–driven EFT testing solution designed to optimize and streamline transaction workflows. This solution performs AI-powered pre-process validation on incoming EFT files before they enter the core EFT processing systems (such as Informatica or MuleSoft), which are often expensive, licensed platforms.

By validating files upfront, organizations can significantly reduce license and resource costs associated with traditional platforms. Additionally, as an Agentic AI–based solution, the system continuously learns from recurring pre-process issues, enhancing validation accuracy and efficiency over time.

This approach not only lowers costs but also accelerates EFT processing times, delivering measurable improvements in operational performance for financial organizations.

AI-Enabled EFT Pre-Processor with Agentic Framework

Four-Agent Architecture

01

Planning Agent (Orchestrator)

Manages flow: domain detection → file-level → record-level validation

02

Domain Detection Agent (AI-powered)

Classifies domain (e.g., finance, healthcare) via column/data analysis to trigger domain-specific rules

03

File-Level Validation Agent

Checks file structure: size, name, format, encoding etc.

04

Record-Level Validation Agent

Validates row data: presence, formats, valid ranges etc.

Why Agentic AI?

Modular & Autonomous:

Dedicated agents simulate intelligent decision-making

Domain-Aware AI

Adaptive rules based on auto-detected domain

Future-Ready

Easily extend with new agents; Planning Agent handles dynamic orchestration

AI-Powered Automation Self-Healing

AI-Powered Automation Self-Healing

At TekMark, we are leveraging AI-driven self-healing automation to make our testing processes smarter, faster and more resilient. Traditional automation often breaks due to frequent application changes—such as modified UI elements, altered workflows, or updated data structures—leading to high maintenance efforts and delays.

Our AI-enabled self-healing approach addresses these challenges by:

Dynamic Element Recognition

AI intelligently identifies and adapts to changes in application objects, reducing test failures from minor updates.

Auto-Correction of Test Scripts

Automation scripts automatically update themselves when changes are detected, minimizing manual rework.

Predictive Healing

Machine learning models analyze historical test runs to proactively prevent recurring failures.

Smart Data Handling

AI generates or substitutes valid test data when gaps occur, ensuring uninterrupted execution.

With this approach, TekMark ensures greater test stability, lower maintenance costs and faster delivery cycles. By combining domain expertise with AI innovation, we enable our clients to scale automation with confidence and achieve higher ROI from their QA investments.

Selfheal Flow Diagram

Understands DOM Changes

AI analyzes old vs. new application pages to detect structural and attribute differences.

Smart Locator Matching

Uses semantic and contextual similarity (beyond just IDs or text) to identify the right element.

Auto - Fixes

Auto-detects broken locators, self-heals with the correct ones and ensures seamless script execution.

Why AI?

✔ Handles complex, dynamic UI changes beyond rule-based scripts.

✔ Provides context-aware healing by understanding semantics, not just attributes.

✔ Cuts recovery time from hours to minutes, boosting tester productivity.

AI-Driven Regression Planning

AI-Driven Regression Planning

At TekMark, we are enhancing regression testing by applying AI-powered analytics to optimize test planning and execution. Instead of running large, time-consuming regression suites, our AI models analyze application changes, defect history, code coverage and test execution trends to intelligently select the most relevant test cases.

This approach enables us to:

- ✔ Prioritize high-risk areas based on recent changes.
- ✔ Eliminate redundant test runs by identifying overlaps.
- ✔ Predict potential failure points using historical data.
- ✔ Continuously refine regression suites to keep them lean, effective and aligned with evolving applications.

By integrating AI into regression planning, TekMark ensures faster release cycles, higher test efficiency and improved product quality while reducing overall testing effort.

Overview

Running full regression after every change is time-consuming and costly. Regression-AI uses AI-driven intelligence to automatically identify the most impacted test cases whenever new features, enhancements, or bug fixes are introduced.

How It Works

Understands Change Context

AI interprets new functionality, enhancements and fixes

Maps to Test Cases

Uses a multi-step AI process (semantic understanding, text similarity etc) to find the most relevant test cases

Highlights What to Run

Flags only impacted cases, provides a confidence score, and enables human-in-loop review for final validation

With Regression-AI, you don’t just run regression—you run the right regression. Powered by AI, it intelligently narrows test scope to accelerate execution, cut costs and drive a smarter, faster go-to-market.

Cloud Load Testing

At TekMark, we support our clients in addressing today's API performance testing challenges with tools like JMeter, while also preparing them for the future with cloud-based solutions such as Cloud Load Testing Suite.

As part of our cloud-based API performance testing services, we have helped multiple clients migrate their legacy API performance test suites into Cloud—reducing latency, improving scalability and providing real-time performance insights.

For other clients, we have built new API performance test suites directly in Cloud, enabling them to streamline testing and management within a single, centralized cloud environment.

Our Services - TekMark

Testing Services

Delivering excellence through a wide
range of testing services tailored to your needs.

Testing Support

With our extensive QA experience spanning over two decades, our team at TekMark brings a wealth of knowledge and skill to the table. Providing testing support across various stages of the software development lifecycle is crucial for ensuring high-quality products.

Diverse testing types — TekMark has the expertise to support your testing needs.

Testing Roadmap

TekMark specializes in developing customized Strategic Testing Roadmaps to meet clients' exact needs. Our expertise encompasses building robust testing foundations, enhancing established QA processes, or creating entirely new QA frameworks. By delivering innovative solutions, we empower clients to significantly improve testing efficiency, effectiveness and overall product quality.

"Some of Our Sample Test Models That Support Our Strategic Testing Road Maps"

Testing Center of Excellence (TCOE)

A Testing Center of Excellence (TCOE) is a centralized framework designed to support and enhance the testing functions
across an organization. It typically includes:

Testing Specialists

Experts who focus on various aspects of testing.

Standardized Processes

Consistent and repeatable testing procedures.

Metrics and Tools

Tools and metrics to measure and improve testing efficiency and effectiveness.

Infrastructure

The necessary hardware and software to support testing activities.

The goal of a TCOE is to achieve the highest standards of excellence in testing by providing
a structured and efficient approach.

Shift Left Testing Model

Shift-left Testing is an Approach in Software Development That Emphasizes Moving Testing Activities Earlier in the Development Process. This Strategy Aims to Improve Software Quality, Enhance test Coverage, provide continuous feedback and accelerate time to market.

Key Benefits of Shift-Left Testing

Early Detection of Defects

Fixing bugs early reduces cost and complexity down the line, avoiding major rework.

Improved Collaboration

Encourages strong alignment between developers, testers and business teams from day one.

Continuous Feedback

Delivers regular feedback throughout the dev cycle, allowing for agile improvements.

Faster Time to Market

Accelerates delivery cycles with streamlined testing and fewer post-release issues.

Testing Managed Services

Overview

Testing as a Service (TaaS) a concept that's like having a QA genie in the cloud, ready to grant your testing wishes! For clients managing complex testing environments involving multiple vendors, diverse test models, tools and billing structures, TekMark offers comprehensive Testing Managed Services. Our Testing as a Service (TaaS) model provides centralized orchestration and support, streamlining operations and delivering significant cost and efficiency benefits.

🧠

What Is TaaS?

Imagine you're a software development team and you've got this intricate web of code, features and functionality. Now, instead of handling all the testing internally you decide to call in the experts.

That's where TaaS steps in! It's like having a specialized testing SWAT team at your beck and call. You outsource your testing activities to a third-party service provider—think of them as your QA wingmen.

⚙️

How Does TaaS Work?

- ✔️ **Identify Testing Needs:** First, you assess your testing requirements. What kind of testing do you need? Functional? Performance? Security? Compatibility? Usability?
- ✔️ **Service Selection:** Next, you pick the specific testing services you want.
- ✔️ **Test Execution:** The actual testing happens based on predefined criteria and test plans. Bugs tremble in fear.
- ✔️ **Feedback and Reporting:** Detailed test reports arrive, like postcards from the QA realm. You evaluate, make improvements and keep the software ship sailing smoothly.

🚀

Why TaaS?

- ✔️ **TaaS isn't just about convenience;** it's about quality. By tapping into external expertise, you:
- ✔️ **Scale Efficiently:** No need to hire an army of testers. Just dial up the TaaS hotline.
- ✔️ **Stay Agile:** Adapt to changing needs without breaking a sweat (or a keyboard).
- ✔️ **Focus on Core Business:** Let the experts handle testing while you build amazing software.
- ✔️ **Cost-Effective:** Pay for what you use—like a testing utility bill.

Other IT Services - TekMark

IT Staff Augmentation

In Addition yo Our Robust QA Expertise and Testing Services, TekMark Offers Comprehensive IT Staff Augmentation to Address Client's Resource Needs. This Allows us to Provide end-to-end Solutions, from strategic testing planning to skilled personnel deployment.

IT staff augmentation is a strategic approach to fill skill gaps within their teams by temporarily hiring external professionals. These hired specialists—whether developers, testers, designers, or other tech talents—step in, wield their expertise and help you conquer the challenges at hand.

Managed IT Services & Cybersecurity

24/7 support with advanced threat detection, compliance-ready security and Zero-Trust architecture.

IT Consulting

Strategic planning, cost optimization, infrastructure design and digital transformation tailored to your business.

Network & Security Solutions

Modern networking, remote access, cyber-range readiness and resilience consulting.

Software Development

Custom applications, workflow automation, cloud-native builds and full-stack engineering support.

Media & Network Management Systems

Enterprise-grade platforms for media asset management, content orchestration and signal flow monitoring.

Business Strategy Consulting

End-to-end business audits, SWOT analysis, go-to-market planning and process optimization.

Client Success - TekMark

Client Engagement

Discover the real-world impact of our partnership and commitment to quality.

Communication

Foundation of Successful QA Engagement

We keep close and continuous communication with our clients to ensure alignment, progress and mutual understanding of our QA engagement. This helps to avoid any gaps and evaluate our mutual expectations to meet the SLAs.

🤝

Managing Expectations

Ensuring everyone is on the same page regarding project goals and deliverables.

🚨

Proactive Issue Resolution

Identifying potential problems early and addressing them before they escalate.

🔍

Building Trust

Demonstrating transparency and commitment to the client's success.

💬

Enhancing Collaboration

Fostering a productive partnership between the QA team and the client.

Client Engagement

Discover the real-world impact of our partnership and commitment to quality.

Testing Status

A Crucial Indicator of Project Health

Testing status provides a snapshot of the current state of the software testing process within a project. It offers valuable insights into progress, potential issues and overall readiness for release.

Test Execution Progress-

Shows the percentage of test cases executed and their outcome (pass, fail, blocked).

Defect Trend-

Visualizes the number and trend of defects found over time for better tracking.

Test Coverage Matrix-

Displays how much of the application is covered by tests across modules.

Project Management

Helps track testing progress, detect bottlenecks and make informed decisions.

Risk Mitigation-

Allows early issue detection and timely corrective actions to minimize impact.

Stakeholder Communication-

Ensures transparency and builds trust by showing real-time testing insights.

Key Components of Testing Status

Understand the essential aspects that define and drive the success of a test cycle.

Test Case Execution-

Percentage of test cases executed, passed, failed, blocked, or not executed.

Defect Status-

Number of defects found, fixed, reopened and pending.

Test Coverage-

Extent to which the software has been tested (functional, performance, security, etc.).

Test Environment-

Status of the testing environment (hardware, software, network).

Risk Assessment-

Identification and mitigation of potential risks impacting testing.

Common Testing Status Metrics

Key indicators to measure QA progress and effectiveness

Test Execution Efficiency-

Percentage of test cases executed per day.

Defect Density-

Number of defects found per unit of code.

Defect Resolution Rate-

Number of defects fixed within a specified timeframe.

Test Case Pass Rate-

Percentage of test cases that passed execution.

Test Coverage Percentage-

Percentage of code or requirements covered by test cases.

Sample Test Execution Metrics

Testing Sign-off Criteria

Testing sign-off criteria define the conditions that must be met before concluding a particular testing phase or the entire testing cycle. They serve as a gatekeeper, ensuring that the software is ready for the next development stage or release.

Key Components of Testing Sign-off Criteria

Test Case Execution

A specific percentage of test cases executed with a defined pass rate.

Defect Resolution

All high-priority defects are closed and low-priority defects are assessed and managed.

Test Coverage

Sufficient test coverage is achieved based on predefined metrics.

Performance Metrics

Performance benchmarks are met (if applicable).

Security Testing

Security vulnerabilities are addressed to an acceptable level.

Usability Testing

Usability issues are resolved to a satisfactory level.

Documentation

All testing artifacts (test plans, test cases, test reports) are complete and accurate.

Stakeholder Sign-off

Relevant stakeholders approve the test results and sign off on the testing phase.

Benefits of Testing Sign-off Criteria

- Improved Quality: Ensures that the software meets quality standards before proceeding.
- Risk Mitigation: Reduces the chances of releasing a defective product.
- Efficient Resource Allocation: Prevents unnecessary testing efforts.
- Enhanced Stakeholder Confidence: Provides transparency and accountability.
- Clear Decision Making: Offers a clear basis for determining when to move to the next phase.

Client Engagement

Discover the real-world impact of our partnership and commitment to quality.

Final Verdict -Improved QA Maturity

QA Maturity: The Cornerstone of Quality

QA Maturity Refers to The Level of Sophistication and Efficiency of a Company's Quality Assurance Processes. It's a Measure of How Well an Organization Can Consistently Deliver High-Quality Products or Services.

Levels of QA Maturity

Initial:Ad-hoc testing, no defined processes and reactive approach to defects.

Repeatable:Basic test processes are in place, but inconsistency exists.

Defined:Standardized processes and procedures are documented.

Managed:Quantitative metrics are used to measure process performance.

Optimized:Continuous improvement is a focus and predictive quality is achieved.

Key Indicators of QA Maturity

Process Definition:Clear and documented QA processes.

Test Automation:Level of test automation implementation.

Defect Management:Efficient defect tracking and resolution.

Test Environment Management:Effective test environment setup and maintenance.

Risk Management:Proactive identification and mitigation of risks.

Quality Metrics:Use of key performance indicators (KPIs) to measure quality.

Continuous Improvement:Focus on ongoing process enhancement.

Benefits of High QA Maturity

Improved Product Quality:Fewer defects and higher customer satisfaction.

Faster Time-to-Market:Efficient testing processes accelerate release cycles.

Reduced Costs:Optimized processes and defect prevention save money.

Competitive Advantage:Strong QA practices differentiate the organization.

Increased Customer Confidence:Demonstrated commitment to quality builds trust.

Testing Maturity Grid
